Emerson Earns 2024 ENERGY STAR® Partner of the Year Award for Energy Management

Emerson is proud to announce that we have earned the 2024 ENERGY STAR Partner of the Year Award in Energy Management from the U.S. Environmental Protection Agency (EPA), marking the company's second consecutive award for exemplary progress toward a decarbonised future.

With a footprint of nearly 600 facilities, Emerson has tracked and benchmarked energy usage over the past five years as a key part of our long-term commitment to achieve net zero greenhouse gas emissions across our global operations by 2030. As a result, the company has conducted more than 70 Energy Treasure Hunts worldwide and implemented an array of energy-saving measures, reducing emissions intensity by 64% and energy intensity by 41% compared to a 2018 baseline.

The 2024 award recognizes Emerson's energy efficiency efforts in 2023. Some key accomplishments include:

- Strengthening internal communication and energy talent activation. Emerson formalized support for its "Green Teams Network" in 2023, which has evolved into a community of over 120 unique global teams. These teams regularly share sustainability best practices and are guided by centrally provided resources.
- Conducting Energy Treasure Hunts to identify savings opportunities in facilities worldwide. Emerson completed 27 Energy Treasure Hunts last year. These events have identified \$4 million in annual energy savings opportunities since the program's start in 2020.
- Deploying new resources to accelerate the pace of energy intensity reductions. Emerson released its Sustainable Building Standards, leveraging best practices based on the company's pillars of decarbonisation throughout a construction project, from site selection to commissioning.
