

KTM BALL VALVES FOR INDUSTRIAL AND PROCESS APPLICATIONS

EF190 - TWO-PIECE BALL VALVE

High performance two-piece ball valve for demanding process and utility applications

FEATURES

- The range includes two-piece split body ball valve designs - standard and fire tested with flanged end connections
- Full compliance with ASME B16.34 and EN 12516 - 1 with respect to the wall thickness, bolting and shaft stress analysis
- Valve pressure rating:
 - ASME Class 150/300
 - DIN PN 10/16/25/40
 - JIS 10K/20K
- Size range DN 15 to DN 300 (NPS ½ to NPS 12)
 - full bore
- Carbon steel or stainless steel body materials
- Purchase procedure for the carbon steel bodies specifies double material certification WCB/WCC and 1.0619/1.0625
- Investment cast body DN 15 to DN 100 (NPS ½ to NPS 4)
- Sand cast body DN 125 to DN 300 (NPS 5 to NPS 12)
- Optional casting per AD 2000 W0
- Standard ball valve with respect to the PAS1085 specification Class D
- ISO 5211 / EN 15081 top mounting plate available with male centering for easy actuation
- Double shaft seal design complies with TA Luft VDI 2440 requirements
- Patented 'SEALMASTER' shaft arrangement
- Blow-out proof shaft
- Anti-static design according to ISO 17292
- Various seat material options
- Tightness to EN 12266-1 Rate A
- Locking device standard on all valves
- Patented 'POSILOCK' handle for DN 15 to DN 50 (NPS ½ to NPS 2) full bore

GENERAL APPLICATION

The EF190 has been designed according to the most stringent international standards and end-user specifications to be used in criticals and hazardous applications in the chemical, petrochemical, oil & gas and related industries.

KTM BALL VALVES FOR INDUSTRIAL AND PROCESS APPLICATIONS

EF190

POSILOCK® handle

FEATURES

- Simple construction
- Smooth action for locking trigger
- Wrapped locking trigger design prevents the spring from coming out
- The elasticity of the spring makes the trigger automatically bounce back to its original position, which keeps the plate in position for firm locking. This also avoids unwanted valve operation caused by accident.

NOTES

1. Increase by 25% for MG1241, carbon & SS filled seat.
2. Increase by 15% for dry gas or oil free products.
3. Increase by 40% for dry gas (-10°C and below).
4. Increase by 40% for gas below -10°C or for liquid with slurry powder.
5. Increase by 40% for high viscosity fluid.
6. For actuator sizing, we recommend to add at least 20% of the break-away torque of valve as safety factor.

KTM BALL VALVES FOR INDUSTRIAL AND PROCESS APPLICATIONS

SEALMASTER®

PATENTED SEALMASTER® SHAFT SEAL ARRANGEMENT

Our extremely high cycle shaft sealing design is accomplished by double sealing system. The high performance of KTM EF190 Ball Valves is mainly due to unique SEALMASTER® shaft seal arrangement, which provides a primary sealing. It has been specially designed and constructed to prevent line fluid permeation and resultant leakage. On top of this arrangement are multiple layers of V-Ring shaft packing this acts as secondary sealing. A set of Belleville washers automatically and constantly compresses the seals to adjust for wear, pressure and temperature fluctuations. Every KTM EF190 Ball Valve is a stalwart barrier against Fugitive Emissions.

EXPLANATION OF SEALMASTER®

The live loaded SEALMASTER® is a combination of 3 components; (A) a cup and cone PFA/TFE upper thrust seal, (B) a cup and cone sintered 316SS center load ring and (C) a flat SS/TFE lower thrust seal. When tightened, the live loaded shaft pulls up and compressing the shaft thrust seals. As this happens, material from upper and lower thrust seal extrude between shaft and body enclosures. (See 1-6). The surfaces between the bottom of lower thrust seal and top of shaft flange are smooth and all rotation occurs between these two surfaces leaving the shaft thrust seal 'static' to create the best possible seal. As rotation continues, components bed in and keep seal performance constant with usage.

MAIN FEATURES OF SEALMASTER® - PATENTED SHAFT SEAL ARRANGEMENT

- MULTIPLE sealing up to 6 areas (see view 1 - 6).
- Encapsulated STATIC sealing achieved on upper thrust seal.
- Constant sealing force transmitted to shaft (see arrow) making shaft primary sealing 'positive'.
- Excellent wear resistance on lower thrust seal (50% SS filled PTFE).
- Reduced seal friction as a result of better than Ra 0.8 m (150 grit) shaft finish.

 DN 15 to DN 300 (NPS ½ to NPS 12) EF190/EF190F

No.	Part name	Material
1	Lower thrust washer	50% SS powder / 50% PTFE
2	Compress ring	316 SS
3	Upper thrust washer	TFM 1600
4	V-ring shaft packing	PTFE *
5	Thrust washer	50% SS powder / 50% PTFE

* For the EF190F, the V-ring PTFE shaft packing is replaced by graphite packing
