Interactive Plant Environment

ABOUT EMERSON'S INTERACTIVE PLANT

Expedite the learning curve at our Interactive Plant Environment, where Emerson courses are designed to enhance the learner's training experience on our Measurement Instrumentation by simulating real-life plant situations. This immersive training models plant environments, where we can replicate your most common (and unexpected) process scenarios. Our benign oil and water process offers a breadth of measurement points, enabling contextual training within a hazard-free environment. At the Interactive Plant Environment, we're building process proficiency and know-how that far exceeds basic classroom knowledge.
