# Improve safety and measurement accuracy

## Highest level precision for your bulk liquid storage tanks

The Rosemount 5900S radar gauge with its 0.5 mm instrument accuracy reduces level measurement uncertainty to a minimum. It enhances your storage operation by providing:

- Certified custody transfer accuracy according to OIML and other legal metrological authorities
- Better inventory management
- Reliable loss control data

The Rosemount 5900S is normally combined with high precision multi-spot temperature sensors. This enables accurate net volume calculations according to API and other standards.

## Make operations more efficient

- No moving parts and no contact with the liquid gives increased reliability and fewer interruptions
- Most Rosemount 5900S antenna types are installed with the tanks in operation
- Emerson wireless solution can drastically reduce installation cost and give you access to remote tanks
- The Rosemount 5900S gauge is available with antennas for all bulk liquid storage applications and tank types

## Taking overfill safety to a higher level

- Innovative 2-in-1 feature with two radar gauges in one housing for independent level and overfill measurement
- SIL 2 and SIL 3 certified safety according to IEC 61508
- Enables API 2350 compliant solutions

# Get complete level and inventory information

The Rosemount 5900S is a premium non-contact radar level gauge, suitable for tank terminals and refineries. It is integrated into a high performance tank gauging system including average temperature measurement, free water level, pressure and API standard net volumes. See also Rosemount Tank Gauging [System Data Sheet \(SDS\)](#).

Data is displayed locally and on a host computer or via the Rosemount TankMaster™ inventory software in the control room.

## SIL safety functions

Rosemount 5900S is certified SIL 2 and SIL 3 capable for use in overfill prevention systems via outputs from the Rosemount 2410 Tank Hub connected to the gauge. The alarm signal can be connected to an Emergency Shut-down System (ESD)/Automatic Overfill Prevention System (AOPS).

SIL 2 is achieved via the 4-20 mA output or via a safety relay. SIL 3 requires a Rosemount 5900S with the 2-in-1 option. The Safety Instrumented System (SIS) functionality activates a separate alarm loop at a preset liquid level and triggers the safety relay or analog output in the tank hub.

### 2-in-1 gauge for cost-efficient level measurement redundancy

The Rosemount 5900S gauge can be delivered with two independent units in one housing. This unique 2-in-1 solution gives you one primary and one backup level unit, or one level gauge plus an independent radar based High-High level alarm. It means that the single Rosemount 5900S 2-in-1 can serve as a safety certified level device in two independent protection layers (i.e. BPCS and SIS).

**Figure 2: Rosemount 5900S with Two Galvanically Separated Gauges within the Same Housing (2-in-1 Solution)**

The 2-in-1 solution enables real-time delta verification by configuring the transmitter to compare signals on both units. The 2-in-1 solution uses only one tank opening, which reduces installation cost.

### Innovative antenna technology

The drip-off design with inclined polished PTFE surfaces on the antenna enables highest performance by reducing condensation from product and water.

The still-pipe gauge uses the Low Loss H01 radar transmission mode. This mode focuses the microwave energy into the center of the pipe, ensuring custody transfer accuracy also in old still pipes with rust and product deposits.

## Access information when you need it with asset tags

Newly shipped devices include a unique QR code asset tag that enables you to access serialized information directly from the device. With this capability, you can:

- Access device drawings, diagrams, technical documentation, and troubleshooting information in your MyEmerson account
- Improve mean time to repair and maintain efficiency
- Ensure confidence that you have located the correct device
- Eliminate the time-consuming process of locating and transcribing nameplates to view asset information

## Rosemount 5900S Radar Level Gauge with parabolic antenna

Rosemount 5900S with parabolic antenna is a premium non-contact radar level gauge. The parabolic antenna is the first choice for installation on tanks with fixed roofs without a still-pipe. It can be installed on existing manhole covers and close to the tank wall due to the narrow radar beam and high signal to noise ratio. In certain cases, it can be used on tanks with floating roofs to measure the distance down to a target plate on the floating roof.

- Measures all products ranging from light products to heavy fuel oil, bitumen and asphalt
- Antenna design gives extreme tolerance to product build-up and condensation
- Custody transfer accuracy according to OIML R85:2008
- Certified SIL 2 and SIL 3 capable according to IEC 61508
- 2-in-1 functionality available for redundant level measurement
- Communicates via a 2-wire, low voltage Tankbus for easy and safe installation
- Installation normally with tank in service

### Measurement principle

The FMCW-method (Frequency Modulated Continuous Wave) means that the transmitted radar signal has a linear frequency variation around 10 GHz. The reflection from the liquid surface has a slightly different frequency compared with the signal transmitted from the antenna when the reflection is received. The difference in frequency is directly proportional to the distance between the antenna and the liquid surface, and thereby also the liquid level. This technology enables a very accurate and stable measured value.

---

(1) Some level offset may be expected on the secondary unit.

## Antennas

The Rosemount 5900S antennas have a drip-off design which for some versions also include inclined polished PTFE surfaces. Condensation on the antenna is minimized, and the radar signal remains strong. This results in maintenance free operation, high accuracy and reliability. There is always a suitable antenna for every tank type, tank opening and application:

- Parabolic
- Horn
- Still-pipe array
- LPG/LNG

## Transmitter head

The same transmitter head is used for all Rosemount 5900S antenna types, minimizing spare part requirements:

- The dual compartment transmitter housing, with electronics and cabling separated, can be replaced without opening the tank
- It is protected against lightning, moisture/rain, and has a surface protection against sulphur and salt spray atmospheres
- Electronics consists of one or two encapsulated units. The 2-in-1 solution has duplicate, galvanically isolated electronic units in the same housing
- No need for re-calibration
